Techrider:

No sound-tech is traveling with the artist. The band needs 1 hour for soundcheck.

The PA must have sufficient and enough headroom to cover the entire audience and be suitable for live music (D&B, Dynacord, EV, JBL, H&K, Turbosound).

For the artist to do the best possible performance we need the rolling equipment:

- High quality console with at least 24 inputs, there of 16 mono inputs (Allen&Heath, Soundcraft, Yamaha), 4 band parametric equalization on each channel, 6 aux send (4 pre-fader monitor mix and 2 post-fader for effects send)
- 3 separate stage mixes (3 xlr in-ear out)
- High quality reverb unit (Yamaha SPX, TC Electronics, Lexicon)
- Stereo Multi-band EQ (30-band) for FOH
- Multi-band EQ (30-band) for each monitor send (preferred)

If not clarified differently, we bring our own backline.

Light:

No light-tech is traveling with the artist. The band prefers white light on stage and is in need of 3 straight boom stands to mount own stage lamps on it. These stage lamps can be added to the light unit. If possible it would be good to have floor- and sidespots.
