

# THE BEATS

# The Beats Tech Rider

The Beats are a three-piece technotronica live band consisting of the following members and instruments:

Patrick Müller	synth (Novation Bass Station), drum machine (Korg Mini Pops 3)
Carl-John Hoffmann	guitar. amplifier LANEY LC15 has an XLR out (via Palmer PDI-09)
Uli Himstedt II	synth (Korg Poly-800)

...and lots of effects pedals.

## Stage requirements

A PA, a stage box, a mixing console, all respective cables and a charming, patient and experienced mixing engineer must be provided by the venue/organiser. We also need a monitor speaker.

We need four line channels in your mixing console. They can all be mono. It would be nice if two of them were stereo (for the synths), but that is not a requirement.

Please provide an XLR cable to pick up the guitar signal from the amp/DI box.

We will need a table. It must be large enough to fit all our instruments and effects. We will be standing around the table.

Also, please provide several continental European multiple socket strips we can plug our instruments, effects and the guitar amp in.

## Catering requirements

If food is provided by the venue/organiser, it would be kind to consider that Uli Himstedt II requires a strictly vegan diet.
