

TECH SPEC

1 guitar, 2 mics, 2 mic stands, RC-300 loop pedal, boss distortion pedal, bass effect, and a vocal harmonizer.

It is a relatively easy set up with a big sound. I plug straight into the mixer and everything goes through the PA system. I use only 2 channels in the mixer.. 1 for the loop pedal and one for main vocs. The guitar, effects and 2nd mic are all plugged in to the loop pedal. This set up can be seen in the live video in the links.

I require a fixed location. As a solo artist with an RC-300 loop pedal so I do not need a huge amount of space! I have played many gigs and supported many bands and as long as there is space for the loop pedal and me I am good to go.
