

HALFTONES ::: TECHNICAL RIDER

One bass amp, possibly tube head and 4x12/4x10 cabinet. Combo amps are fine as long as they have at least 1x15" speaker and, if solid state, are approx. 300 watts loud, if it's tube amp than 40 watts are fine.

Stand for guitar amp. We like to place a guitar amp a little above the ground, 1 meter height is fine.

Drum set. We usually bring our own cymbals and snare.

Two microphones for vocals.

Microphones and stands for amplification of amps and drums. We usually mic amps with a single microphone and drums with 4-6 microphones.
