## GOSPEL DATING SERVICE are a three piece band:

Christoph – Vocals, Synth, Keys

David – Bass, Guitar

Dave – Drums, B-Vocals

## sound

### stage (stageplot see p.2)

Please provide a nice, sturdy and flat stage measuring at least 5 x 4 metres.

### pa & foh

Please provide a professional PA system adequate for the venue and setup for the best possible coverage of the audience area.

Make sure that a friendly and competent tech is present at the venue from load-in to end of show/load-out.

We require a **professional** FOH Desk with at least 24 Inputs and 6 Aux Sends (3 pre, 3 post). In case of a digital desk, please get in touch, maybe we can provide a show file.

A well serviced analogue desk complete with a nice siderack consisting of at least 4 gates, 4 compressors, 2 multieffects and 1 delay unit is fine too.

FOH should be situated as close as possible to the centre of the venue and -if accessible by members of the audience- secured with barriers.

### monitoring

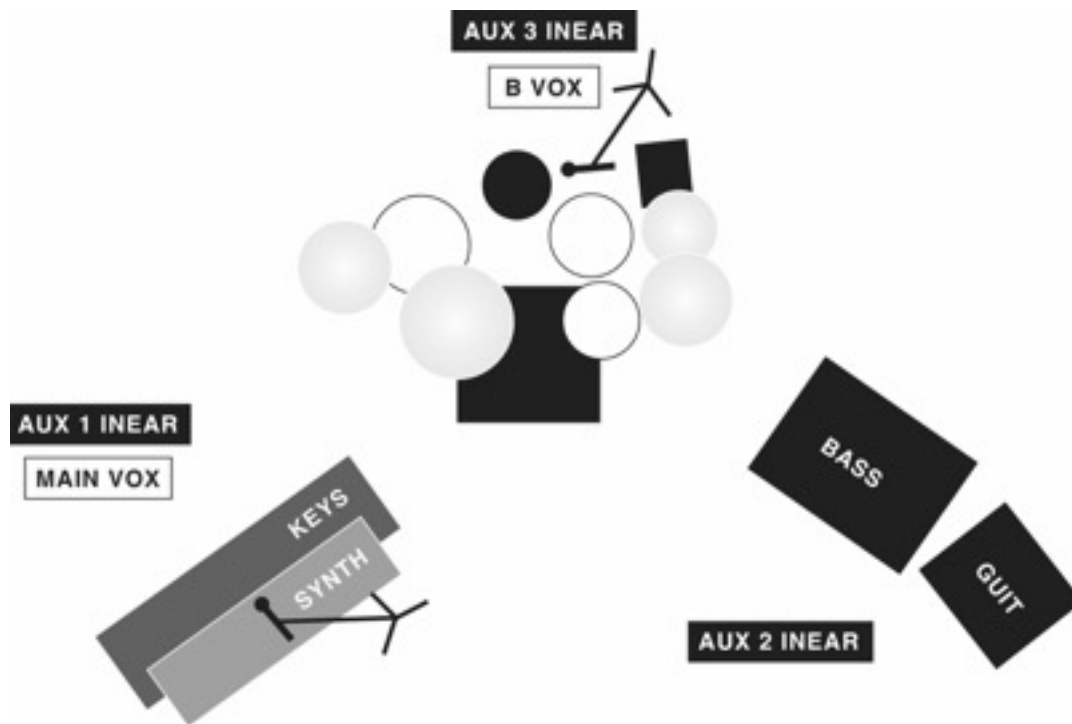

Monitoring is done via a separate monitor-rack with splitters. This rack is positioned stage left of the drummer, so all split channels have to go here first. Two 8 channel looms (length: 5m) are then connected to the local stagebox.

If there are two or three wedges available, it would be great to have them fed by 3 sends from FOH or if available by the monitor engineer. You know. Just in case. For the feel.

### microphones, dis, stands

We normally travel with all the necessary microphones and DIs, so we only need enough XLR cables and stands (see input list on p.3).

If we don't bring all the microphones, we'll get in touch with you! It's okay to substitute microphones for comparable ones. **As a general rule: shure, sennheiser, audix are fine, t.bone, samson, behringer not.**
