

DEFECT DATA // TECHNICAL RIDER 2020

Mixer // Power:

1 x Table (circa 1,50 meter x 90cm, minimum 1 meter high)

1 x Mixing Desk with 4 channels or more (with power and output cables to the main system)

1 x 6 Way Power Strip with Schuko connections

* Mixing Desk should be placed on the far right or left side of the Table.

Monitoring:

1 Stereo Pair monitors connected via the monitor outputs from the mixing desk.

Monitors should be placed on the sides of the table either on stands or on floor (wedges).

+ Red Bull on stage if possible.

* Sound check before showtime if possible.

In the event that a soundcheck on the main system is not possible due to constrictions
(i.e. lack of space due to other performers, festivals, main system is in use)

then it is necessary that all channels on the mixing desk are checked by

the sound technician prior to showtime. In this case a line check with headphones will be done.

* A system technician familiar with the rigging, cabling and operation of the main system shall be available from the time of soundcheck and the entire duration of the performance.

* A safe place / lock up for my equipment before and after showtime would be very grateful.

* Please do not hesitate to contact me
in the event that questions arrive before / on the date of performance
