

Guitarist uses synth and stereo reverb effects through p.a - 1/4 jack cables usually used, stereo D.I box optional

All three vocals require reverb; Bassist and drummer medium length  
Guitarist slightly shorter length, very short delay on all

Guitar amps are in stereo  
Stereo D.I for guitar synth effects, keys and drum machine

D.I for bass, drum triggers and keys

Minimum of 1 monitor each due to harmony vocals, loops, triggers.  
Ideal scenario is shown

NOTE; keys not used at all gigs, if needed band will mention it

Lead vocal mainly guitarist, specified on setlist if required

Guitar; Peasey  
Bass; Chris  
Drums; Sam

Any other issues, just ask

Cheers!
